What is my current challenge in teaching for mathematical literacy?

Pick an area: **Assessment** Evaluation Planning Instruction

What do I already know about this?

I know how to carry out a lesson after planning it. I know the elements of the lesson and how to teach it to students. I continuously assess my students through the lesson and plan my lessons with the learning targets and students' interest in mind. I make sure to have time for students to discuss during the lesson. I make sure I show enthusiasm while I teach and project my voice so the students are engaged.

What questions do I have?

- How can I ask better open-ended questions and incorporate them to the lesson?
- How can I get the students fully engaged into the lesson?
- How can I make sure the students really understood the concepts from the lesson? How would I be able to tell this?
- Is multiple intelligence and choice affective in every classroom? Why and why not?
- How can I make sure to continuously assess my students?
- How can I allow students to make their own connections during the lesson?

*Which **one** of these questions do I need to focus on to develop my understandings?*

How can I make sure the students really understood the concepts from the lesson? How would I be able to tell this?

How will I develop my understandings?

I will listen to our discussion and hearing our perspectives on effective instruction. I will ask questions during the discussion as well as being an active listener during the discussion that will be helpful for instruction.

What support do I need to enact my action plan?

Your continuous support and discussion will be helpful in providing guidance and advice to promote my student interest and engagement during instruction.

How will I monitor my progress?

I will reflect on our discussion and implement the advice accordingly as I continue to prepare to form my lessons for my unit plan. I will also monitor how successful my instruction was with and reflect on my effectiveness of my planning.
